SOD, selective oral decontamination
SDD, selective digestive decontamination

[Intervention Review]

Topical antibiotic prophylaxis to reduce respiratory tract infections and mortality in adults receiving mechanical ventilation

Minozzi S, 2021

- ▶ **41 études, 11,004 patients**
- ▶ durée ventilation mécanique 2-6 j
- ▶ durée de séjour en Réa 11-33 j
- ▶ immunodépression 0-22%
- ▶ >40% possible risque de biais de sélection
- ▶ 5 études à risque élevé de biais de détection des infections respiratoires basses (IRB)

[Intervention Review]

Topical antibiotic prophylaxis to reduce respiratory tract infections and mortality in adults receiving mechanical ventilation

Minozzi S, 2021

ATB systémique et locale

- ▶ Réduit la mortalité vs placebo ou pas de traitement **RR (risque relatif) 0.84, 95% IC (intervalle de confiance) 0.73 - 0.96** (18 études, 5290 patients, certitude de l'évidence: **HAUTE**)

- ▶ Réduit probablement les infections respiratoires basses (IRB) **RR 0.43, 95% IC 0.35 to 0.53** (17 études, 2951 patients, certitude de l'évidence: **MODEREE**)

[Intervention Review]

Topical antibiotic prophylaxis to reduce respiratory tract infections and mortality in adults receiving mechanical ventilation

Minozzi S, 2021

Majorité des études aux Pays-Bas ou des réanimations à faible incidence de BMR

- ▶ Réduit probablement la mortalité vs placebo ou pas de traitement (**RR 0,96, 95% IC 0,87-1,05**, 22 études, 4213 patients; certitude de l'évidence: **MODEREE**)

- ▶ Pourrait réduire les IRB (**RR 0,57, 95% IC 0,44-0,74**; 19 études; 2698 patients; certitude de l'évidence: **FAIBLE**)

Decontamination Strategies and Bloodstream Infections With Antibiotic-Resistant Microorganisms in Ventilated Patients

L'utilisation de soins de bouche CHX, SOD, ou SDD associée à une réduction des bactériémies à BGN MR?

Wittekamp B, JAMA 2018

POPULATION

5561 Men 3104 Women

Adult patients who were not pregnant, with expected duration of invasive mechanical ventilation of ≥ 24 hours

Median age: **64.1** years
(range, 18-98)

LOCATIONS

13

ICUs in Europe

INTERVENTION

8665 Patients randomized

2251

Standard of care

Daily CHX body washing and hand hygiene

2108

CHX 2% mouthwash

4 times daily

2224

SOD

Mouthpaste with colistin, tobramycin, and nystatin 4 times daily

2082

SDD

Mouthpaste and gastrointestinal suspension with colistin, tobramycin, and nystatin 4 times daily

Decontamination Strategies and Bloodstream Infections With Antibiotic-Resistant Microorganisms in Ventilated Patients

Wittekamp B, JAMA 2018

FINDINGS

Standard of care

2.1% bloodstream infection
31.9% 28-day mortality

CHX mouthwash

1.8% bloodstream infection
32.9% 28-day mortality

Limites

Pas d'ATB systémique

SOD, SDD arrêtées après extubation

Adjusted hazard ratios (95% CIs) vs standard of care
for bloodstream infection
with multidrug-resistant gram-negative bacteria

1.13 (0.68-1.88) for CHX

0.89 (0.55-1.45) for SOD

0.70 (0.43-1.14) for SDD

JAMA | Original Investigation | CARING FOR THE CRITICALLY ILL PATIENT

Effect of Selective Decontamination of the Digestive Tract on Hospital Mortality in Critically Ill Patients Receiving Mechanical Ventilation A Randomized Clinical Trial

The SuDDICU Investigators for the Australian and New Zealand Intensive Care Society Clinical Trials Group

Effect of Selective Decontamination of the Digestive Tract on Hospital Mortality in Critically Ill Patients Receiving Mechanical Ventilation

A Randomized Clinical Trial

The SuDDICU Investigators for the Australian and New Zealand Intensive Care Society Clinical Trials Group

QUESTION Among critically ill patients receiving mechanical ventilation, what is the effect of selective decontamination of the digestive tract (SDD) on hospital mortality?

POPULATION

3780 Men 2202 Women

Adults receiving mechanical ventilation in an intensive care unit

Mean age: 58 years

LOCATIONS

19

Intensive care units in Australia

INTERVENTION

5982 Patients randomized

2791

SDD

6-Hourly oral paste and gastric suspension of colistin, tobramycin, and nystatin, plus 4-day IV antibiotic course

3191

Standard care

Standard care without SDD

PRIMARY OUTCOME

90-Day in-hospital mortality

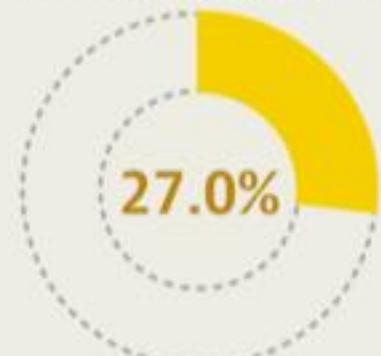

Effect of Selective Decontamination of the Digestive Tract on Hospital Mortality in Critically Ill Patients Receiving Mechanical Ventilation A Randomized Clinical Trial

The SuDDICU Investigators for the Australian and New Zealand Intensive Care

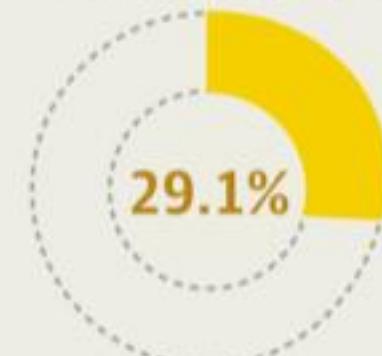

FINDINGS

In-hospital deaths

SDD
753 of 2791 patients

Standard care
928 of 3191 patients

SDD did not significantly reduce
in-hospital mortality:

Mean difference, **-1.7%** (95% CI, -4.8% to 1.3%)

Odds ratio, **0.91** (95% CI, 0.82-1.02); $P = .12$

Effect of Selective Decontamination of the Digestive Tract on Hospital Mortality in Critically Ill Patients Receiving Mechanical Ventilation A Randomized Clinical Trial

The SuDDICU Investigators for the Australian and New Zealand Intensive Care Society Clinical Trials Group

Outcomes and adverse events	Selective decontamination of the digestive tract (n = 2791)	Standard care (n = 3191)	Difference, % (95% CI)
Microbiological secondary outcomes^b			
Any antibiotic-resistant organism found, No. (%)	583 (20.9)	1036 (32.5)	AD, -11.0 (-14.7 to -7.3)
Any blood organism found, No. (%)	156 (5.6)	259 (8.1)	AD, -1.95 (-3.47 to -0.43)
Positive for <i>Clostridioides difficile</i> , No. (%)	14 (0.5)	29 (0.9)	AD, -0.24 (-0.59 to 0.10)
Defined daily dose of antibiotics over 28 d, mean (95% CI) ^g	0.81 (0.75-0.88)	0.85 (0.78-0.91)	MD, -0.035 (-0.13 to 0.06)

- ICU mortality, MV-free days, ICU-free days, adverse events: NS

Association Between Selective Decontamination of the Digestive Tract and In-Hospital Mortality in Intensive Care Unit Patients Receiving Mechanical Ventilation

A Systematic Review and Meta-analysis

- ▶ 32 RCT, 24 389 patients
- ▶ Risk ratio (RR) for mortality (SDD vs standard care)
0.91 (95% credible interval [Crl], **0.82-0.99**; $I^2 = 33.9\%$)
- ▶ Beneficial association of SDD evident in trials with an iv agent
RR **0.84 (0.74-0.94)**, but not in trials without an iv agent RR, **1.01 (0.91-1.11)**, (P value interaction = **0.02**)

Association Between Selective Decontamination of the Digestive Tract and In-Hospital Mortality in Intensive Care Unit Patients Receiving Mechanical Ventilation

A Systematic Review and Meta-analysis

- ▶ SDD associated with reduced risk of VAP
RR 0.44 (0.36-0.54)
- ▶ and ICU-acquired bacteremia
RR 0.68 (0.57-0.81)
- ▶ Available data regarding the incidence of positive cultures of antimicrobial-resistant organisms were not amenable to pooling and were of very low certainty

Selective digestive decontamination-Con

James C. Hurley^{1,2*} 

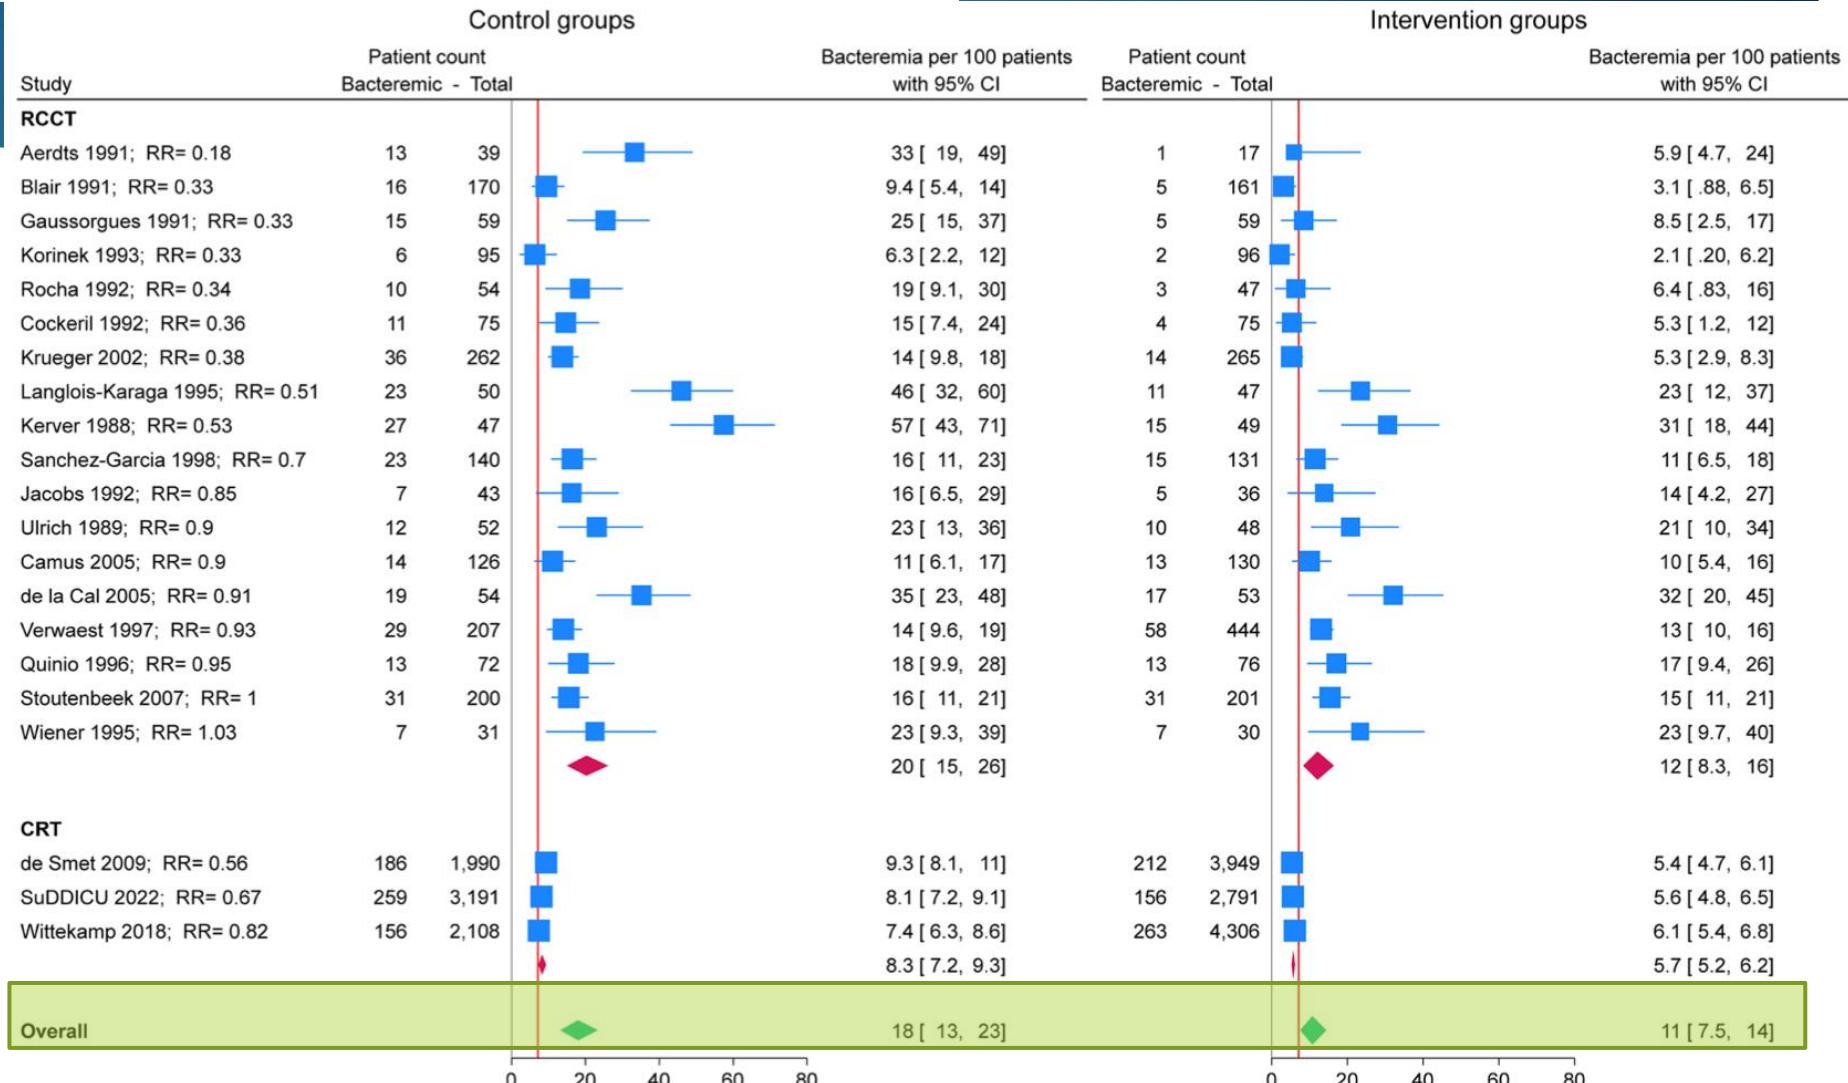

ICM 2023

- ▶ Significantly less mortality among 27 studies (5699 patients) with patients individually randomized in concurrent trials (RCT) but not among 3 studies (18,335 patients) with groups randomized in cluster randomized trials (CRT): difference 15% vs 0%
- ▶ Is SDD safe?
- ▶ Incidence of BSI overestimated in RCTs?

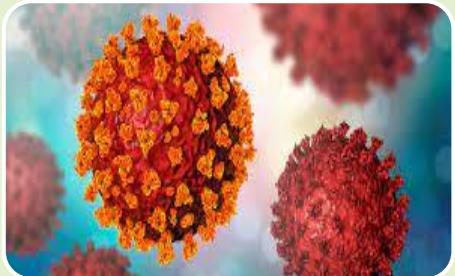

ICM 2023

Selective digestive tract decontamination in critically ill adults with acute brain injuries: a post hoc analysis of a randomized clinical trial

Young PJ, ICM 2023

- ▶ Post hoc analysis from a crossover, cluster randomized clinical trial
- ▶ ICUs randomly assigned to SDD or SC for two alternating 12-month periods
- ▶ Patients with an acute brain injury included
- ▶ SDD group ($n = 968$) : **oral** paste and **gastric** suspension containing colistin, tobramycin, and nystatin for the duration of mechanical ventilation, plus a 4-day course of an **intravenous antibiotic**
- ▶ Patients in the control group ($n = 1093$): standard care

Selective digestive tract decontamination in critically ill adults with acute brain injuries: a post hoc analysis of a randomized clinical trial

Young PJ, ICM 2023

Characteristic	SDD (N=968)	Standard care (N=1093)	Difference % (95% CI)	Odds ratio (95% CI)	p value
Primary outcome: in-hospital death within 90 d, no. (%)					
Primary analysis	313 (32.3)	415 (38)	– 6.2% (– 8.9% to – 3.5%)	0.76 (0.63 to 0.92)	0.004
Adjusted analysis ^a				0.74 (0.57 to 0.97)	0.03
Adjusted analysis ^b				0.78 (0.59 to 1.04)	0.082

a Adjusted for baseline Age, Sex, APACHE II/III score and diagnosis (operative vs non-operative)

b Adjusted for time from ICU admission to enrolment, systemic steroids, oral chlorhexidine, and on intravenous antibiotics at time of enrolment, in addition to the other variables from the previous model

Selective digestive tract decontamination in critically ill adults with acute brain injuries: a post hoc analysis of a randomized clinical trial

Young PJ, ICM 2023

Clinical secondary outcomes

Death in the ICU, no. (%)	247 (25.5)	323 (29.6)	– 5.0% (– 8.4% to – 1.5%)	0.79 (0.65 to 0.97)	0.02
Days alive and free of mechanical ventilation					
Mean ± SD	57.2 ± 38.3	52.1 ± 39.5	5.60 (2.17 to 9.03)		0.001
Median (IQR)	81 (3 to 87)	78 (1 to 87)			
Days alive and free of ICU admission					
Mean ± SD	54 ± 37.3	49.2 ± 38.4	5.18 (1.85 to 8.50)		0.002
Median (IQR)	76 (0 to 84)	72 (0 to 83)			
Days alive and free of hospital admission					
Mean ± SD	39.8 ± 34.2	36.3 ± 34.5	3.72 (0.70 to 6.75)		0.02
Median (IQR)	50 (0 to 72)	38 (0 to 72)			

Selective digestive tract decontamination in critically ill adults with acute brain injuries: a post hoc analysis of a randomized clinical trial

Young PJ, ICM 2023

Microbiological secondary outcomes			Absolute difference ^c , (95% CI)	
Positive for <i>Clostridioides difficile</i> whilst in ICU, no. (%)	1 (0.1)	9 (0.8)	– 0.56 (– 1.01 to – 0.11)	0.018
Any blood organism found, no (%)	52 (5.4)	79 (7.2)	– 1.53 (– 3.34 to 0.28)	0.09
Any blood organism found except coagulase negative <i>S. aureus</i> , no. (%)	27 (2.8)	60 (5.5)	– 1.91 (– 3.48, – 0.35)	0.02
Any antibiotic resistant organism found, no. (%)	198 (20.5)	374 (34.2)	– 13.9 (– 17.5, – 10.3)	<0.0001

- SOD: csHR 0.60 (0.44-0.81) acquisition CR-GNB

Antibiothérapie et microbiome

Woerther PL, IJAA 2018

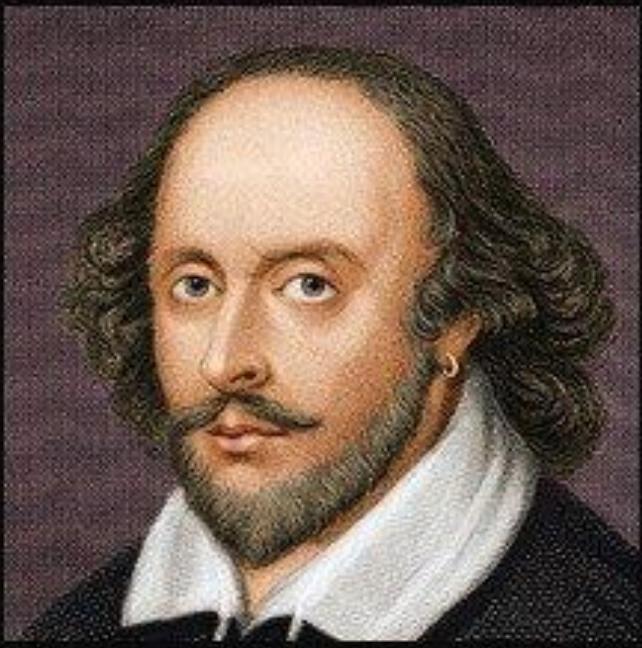

Conclusions

- ▶ SDD associée à une réduction de la mortalité et de l'incidence des IRB dans des réanimations avec une incidence faible d'antibio-résistance
- ▶ La réduction de la mortalité et des IAR plus importante avec la SDD vs SOD
- ▶ L'impact de la SDD sur la mortalité et de l'incidence des IRB dans des réanimation avec une incidence élevée d'antibio-résistance reste à déterminer
- ▶ L'impact de la SDD sur le microbiome digestif et pulmonaire est à évaluer

Sometimes, less is more.

~ William Shakespeare
